Pascal Cherrier, Albert Milani

Linear and Quasi Linear Evolution Equations in Hilbert Spaces: Exploring the Anatomy of Integers (Graduate Studies in Mathematics) Pascal Cherrier, Albert Milani

This book considers evolution equations of hyperbolic and parabolic type. These equations are studied from a common point of view, using elementary methods, such as that of energy estimates, which prove to be quite versatile. The authors emphasize the Cauchy problem and present a unified theory for the treatment of these equations. In particular, they provide local and global existence results, as well as strong well-posedness and asymptotic behavior results for the Cauchy problem for quasi-linear equations. Solutions of linear equations are constructed explicitly, using the Galerkin method; the linear theory is then applied to quasi-linear equations, by means of a linearization and fixed-point technique. The authors also compare hyperbolic and parabolic problems, both in terms of singular perturbations, on compact time intervals, and asymptotically, in terms of the diffusion phenomenon, with new results on decay estimates for strong solutions of homogeneous quasi-linear equations of each type. This textbook presents a valuable introduction to topics in the theory of evolution equations, suitable for advanced graduate students. The exposition is largely self-contained. The initial chapter reviews the essential material from functional analysis. New ideas are introduced along with their context. Proofs are detailed and carefully presented. The book concludes with a chapter on applications of the theory to Maxwell's equations and von Karman's equations.

From reader reviews:

Walter Johnson:

Why don't make it to be your habit? Right now, try to prepare your time to do the important action, like looking for your favorite book and reading a reserve. Beside you can solve your trouble; you can add your knowledge by the guide entitled Linear and Quasi Linear Evolution Equations in Hilbert Spaces: Exploring the Anatomy of Integers (Graduate Studies in Mathematics). Try to make the book Linear and Quasi Linear Evolution Equations in Hilbert Spaces: Exploring the Anatomy of Integers (Graduate Studies in Mathematics) as your good friend. It means that it can being your friend when you sense alone and beside those of course make you smarter than ever before. Yeah, it is very fortunated to suit your needs. The book makes you far more confidence because you can know anything by the book. So , we should make new experience along with knowledge with this book.

David Patton:

As people who live in often the modest era should be upgrade about what going on or facts even knowledge to make these individuals keep up with the era which can be always change and advance. Some of you maybe may update themselves by looking at books. It is a good choice to suit your needs but the problems coming to an individual is you don't know what type you should start with. This Linear and Quasi Linear Evolution Equations in Hilbert Spaces: Exploring the Anatomy of Integers (Graduate Studies in Mathematics) is our recommendation to make you keep up with the world. Why, since this book serves what you want and need in this era.

Richard Vazquez:

Now a day those who Living in the era just where everything reachable by interact with the internet and the resources in it can be true or not require people to be aware of each data they get. How people have to be smart in receiving any information nowadays? Of course the solution is reading a book. Examining a book can help persons out of this uncertainty Information specifically this Linear and Quasi Linear Evolution Equations in Hilbert Spaces: Exploring the Anatomy of Integers (Graduate Studies in Mathematics) book because book offers you rich data and knowledge. Of course the information in this book hundred percent guarantees there is no doubt in it you know.

Marilyn Chambers:

Reading a guide can be one of a lot of exercise that everyone in the world really likes. Do you like reading book thus. There are a lot of reasons why people fantastic. First reading a e-book will give you a lot of new information. When you read a guide you will get new information simply because book is one of a number of ways to share the information or maybe their idea. Second, reading through a book will make anyone more imaginative. When you studying a book especially fiction book the author will bring one to imagine the story how the people do it anything. Third, you are able to share your knowledge to some others. When you

read this Linear and Quasi Linear Evolution Equations in Hilbert Spaces: Exploring the Anatomy of Integers (Graduate Studies in Mathematics), you may tell your family, friends as well as soon about yours reserve. Your knowledge can inspire the others, make them reading a guide.
